BIZBRIDGE

# From trading to readiness

A practical bridge from daily business activity to organised records and clear next steps.

- Youth entrepreneurship and small-business growth
- Built for young founders and township or rural businesses
- Hackathon concept and MVP

THE GAP

# Businesses trade, but records are often fragmented

A founder may have customers and sales without a simple way to organise income, expenses, and preparation for formal markets.

- Cash flow can be hard to see from scattered records
- Funding and procurement preparation can feel unclear
- Payment concerns need careful review, not assumptions

THE IDEA

# One lightweight workflow for the business journey

Start with a profile. Record activity. Understand what has been recorded. Take a practical next step.

- START - Business profile
- MANAGE - Income, expenses, cash-flow view
- PREPARE - Readiness Passport and recommendations
- GROW - Opportunity discovery

THE PRODUCT

# A connected business command centre

BizBridge brings useful early-stage tools into a single authenticated experience.

- Business profile and transaction history
- Monthly totals and six-month cash-flow trend
- Spending patterns by recorded category
- Readiness checklist with saved progress
- Payment-reference review alerts and opportunities

A CLEARER NEXT STEP

# The Readiness Passport turns gaps into actions

Progress combines checks derived from BizBridge records and clearly labelled self-reported preparation.

- Automatic: profile details and transaction records
- Self-reported: registration, tax, bank records, business plan
- Missing items link to practical next steps
- Progress persists with the business account

TRUST, NOT OVERCLAIMING

# Explain what the data can and cannot say

The MVP supports better visibility; it does not certify a business or guarantee an outcome.

- Historical insights use only transactions entered in BizBridge
- Warnings name the period and rule that triggered them
- Self-reported checklist items are not independently verified
- A repeated payment reference is a review alert, not proof of fraud

WHAT WE WILL VALIDATE

# Build with founders, not assumptions

The next step is focused usability and relevance testing with target businesses and support practitioners.

- Can a founder record a transaction quickly?
- Does the trend help explain recorded cash flow?
- Are checklist items useful and understandable?
- Do opportunity listings lead to a relevant action?

THE ASK

# Help us test the bridge

We are looking for founders and business-support organisations to shape the next iteration.

- Try the MVP with synthetic demo data
- Review the readiness checklist and insight wording
- Help prioritise market-access and bookkeeping needs
- BizBridge - from activity to clearer next steps
